TB Topics

Animal Disease Eradication Division

U.S. DEPARTMENT OF AGRICULTURE-Agricultural Research Service

STANCHION

- Acrobatic surgery has no place in the tuberculosis eradication program.
- Adequate restraint is a prerequisite to thoroughness and exactness in any surgical procedure no matter how brief.
- Since the results of the tuberculin tests are dependent on proper technique there is no glory in speed at the expense of a faulty injection.

C.A. No. 2

July, 1957
